- PHP
- JAVA (Android Studio)
- C
- Bash (Shell Script)

#### Database

- Mysql
- Postgresql
- Sqlite3
- CouchDB (NoSQL)
- Pouchdb (NoSQL)

## Project

### **Portfolio**

- Prototypes of projects and modules that I have worked on
- <https://github.com/miftahul001/portfolio>

### **Mobile Alert, June 2022 - August 2023**

- Start a project as a front-end developer, then become a full stack developer
- Client, PT. Telkom
- Network benchmark application with several providers visualized in color on a map using MapBox, starting from national, regional, city to village levels. The project started in June 2022 and was launched August 2023 (15 months), now maintaining database.

### **Always On, March 2023 - July 2023**

- Start a project as a front-end developer, then become a full stack developer
- Client, PT. Telkom
- PT. Telkom backbone network traffic monitoring application throughout Indonesia in real time. Visualized with network nodes and lines, interactively and dynamically using MapBox. There is also a failover simulation feature which functions to predict traffic flow if one or more network segments are lost. Starts March 2023, finishes July 2023 (5 months)
- Prototype <https://miftahul001.github.io/portfolio/tera/>

### **Selfie Pro, May 2023 - present**

- Front-end developer
- Client, PT. Telkom
- Application to control hardware remotely. Starting from hardware at level 3 to hardware on the customer side. I was tasked with creating a pro version of the front-end interface, replacing selfie version 1.0. Starting in May 2023, and currently I am still waiting for developments from the back-end developer side.
- Prototype <https://miftahul001.github.io/selfie/>

### **Qosmo, Agustus 2023 - Desember 2023**

- Full stack developer
- Client, PT. Telkom
- Application to handle PT Telkom ticketing sites throughout Indonesia, replacing spreadsheets. Starting August 2023 launching December 2023, now database maintenance.
- Prototype <https://miftahul001.github.io/portfolio/qosmo/>

### **Qosmo v2, Januari 2024 - present**

- Full stack developer
  - Client, PT. Telkom
  - Application for handling site ticketing, monitoring access performance, monitoring core performance, monitoring orders, and flagging types of problems at PT Telkom sites throughout Indonesia. Divided into three sections, for executives, top-down users, and operational users.
  - Prototype <https://miftahul001.github.io/portfolio/qosmo2/>
